* Electric Field Hockey was created by Ruth Chabay and ran on 1990's computers. (It is still available from Physics Academic Software.) A modern Java version has been created by the PhET group at the University of Colorado and is available on the PhET website.

Electric Field Hockey* - UMD Physics

In "Electric Field Hockey," a player guides a charged puck into the goal (bracket). The player must strategically place positive and negative charges on the "rink" so that when the puck is released, it will be propelled by electric forces into the goal. Clicking the on-screen "Start" button sets the puck free.

At the start of class, I have the Electric Field Hockey simulation loaded, running on my computer, and projected on the front board. I purposely have this simulation ready to go when students enter the room so it piques their interests. This way, when the bell rings I inevitably have some curious students who are ready to volunteer and participate in today's demonstration.

The Put the Charge in the Goal Interactive provides a game-like challenge for Learners to use electrostatic forces to guide a charged puck into a goal. By placing charges on the rink, a charged puck can be attracted and repelled around obstacles and into a goal. Once learners are successful with the first level, they can proceed to the next level.

Lab: Electric Fields Hockey * Objective: To investigate experimentally the concept of the electric field and to map (to represent graphically) some electric field lines for particular configurations of charge. Background: The electric field intensity is defined as the electrical force per unit of charge, or $E = F/q$.
