In mathematics, and more specifically in graph theory, a graph is a structure amounting to a set of objects in which some pairs of the objects are in some sense "related". The objects correspond to mathematical abstractions called vertices (also called nodes or points) and each of the related pairs of vertices is called an edge (also called link or line).

The history of discrete mathematics has involved a number of challenging problems which have

focused attention within areas of the field. In graph theory, much research was motivated by attempts to prove the four color theorem, first stated in 1852, but not proved until 1976 (by Kenneth Appel and Wolfgang Haken, using substantial computer assistance).

Some graphs occur frequently enough in graph theory that they deserve special mention. One such graphs is the complete graph on  $n$  vertices, often denoted by  $K_n$ . This graph consists of  $n$  vertices, with each vertex connected to every other vertex, and every pair of vertices joined by exactly one edge.
