Variables are an important part of science projects and experiments. What is a variable? Basically, a variable is any factor that can be controlled, changed, or measured in an experiment. Scientific experiments have several types of variables. The independent and dependent variables are the ones usually plotted on a chart or graph, but there are other types of variables you may encounter.

What Is a Variable in Science? (Types of Variables)

3.1. Fairness. As noted above, MQM applies to both source and target texts (with different dimensions applying to them). The default MQM scoring method accordingly allows for users to assess source texts to obtain a quality score for source texts and, if both source and target are assessed, issues found in the source may be counted against penalties for issues in the target text, resulting in ...

Multidimensional Quality Metrics Definition - QT21

In mathematics, to solve an equation is to find its solutions, which are the values (numbers, functions, sets, etc.) that fulfill the condition stated by the equation, consisting generally of two expressions related by an equality sign. When seeking a solution, one or more free variables are designated as unknowns. A solution is an assignment of expressions to the unknown variables that makes ...
