In my last post about disposing `IDisposable`s in ASP.NET Core, Mark Rendle pointed out that MVC controllers are also disposed at the end of a request. On first glance, this may seem obvious given that scoped resources are disposed at the end of a request, but MVC controllers are actually handled in a slightly different way to most services.

Reynald goes over how dependency injection is the ability to supply/inject an external dependency into some component. The "dependency" is just another object that your class needs to function. It's a way to decouple your code and to make it cleaner and more modular. He also mentions the approaches for constructor injection, property injection, and method injection and IoC containers like ...

I'm trying to understand dependency injections (DI), and once again I failed. It just seems silly. My code is never a mess; I hardly write virtual functions and interfaces (although I do once in a blue moon) and all my configuration is magically serialized into a class using `json.net` (sometimes using an XML serializer).
