### **Cloning - The Basics Please go to the following website to ...**

The steps leading to current cloning methods began with cloning very simple organisms by artificial embryo twinning (splitting a very early embryo in half in a Petri dish). Some of the first cloned organisms came from embryos that were split in two using a fine piece of hair as a noose.

### **Teacher Guide: You've Come A Long Way Dolly! - Genetics**

Therapeutic cloning produces embryonic stem cells for experiments aimed at creating tissues to replace injured or diseased tissues. Gene cloning, also known as DNA cloning, is a very different process from reproductive and therapeutic cloning. Reproductive and therapeutic cloning share many of the same techniques, but are done for different purposes.

### **Cloning Fact Sheet | NHGRI**

When scientists clone an organism, they are making an exact genetic copy of the whole organism, as described above. When scientists clone a gene, they isolate and make exact copies of just one of an organism's genes. Cloning a gene usually involves copying the DNA sequence...
