The solution of the problem involves substituting known values of G ($6.673 \times 10^{-11} \text{ N m}^2/\text{kg}^2$), m_1 ($5.98 \times 10^{24} \text{ kg}$), m_2 (70 kg) and d ($6.39 \times 10^6 \text{ m}$) into the universal gravitation equation and solving for F_{grav} . The solution is as follows: Two general conceptual comments can be made about the results of the two sample calculations above.

A simple pendulum has a small-diameter bob and a string that has a very small mass but is strong enough not to stretch appreciably. The linear displacement from equilibrium is s , the length of the arc. Also shown are the forces on the bob, which result in a net force of toward the equilibrium position—that is, a restoring force.

Aristotelian physics is a form of natural science described in the works of the Greek philosopher Aristotle (384–322 BCE). In his work *Physics*, Aristotle intended to establish general principles of change that govern all natural bodies, both living and inanimate, celestial and terrestrial – including all motion (change with respect to place), quantitative change (change with respect to size ...
