The Hoek-Brown criterion was introduced in 1980 to provide input for the design of underground excavations in rock. The criterion now incorporates both intact rock and discontinuities, such as joints, characterized by the geological strength index (GSI), into a system designed to estimate the mechanical behaviour of typical rock masses encountered in tunnels, slopes and foundations.

In probability and statistics, Student's t-distribution (or simply the t-distribution) is any member of a family of continuous probability distributions that arises when estimating the mean of a normally distributed population in situations where the sample size is small and population standard deviation is unknown. It was developed by William Sealy Gosset under the pseudonym Student.

However, we argue that acceptance of the “pause” constitutes a departure from standard scientific practice and is indicative of seepage. Fig. 1 shows global temperature anomalies for the period of modern global warming (1970–2013) using three global data sets. The data set of Cowtan and Way (2013) filled known coverage gaps in the HadCRUT4 data set by spatial interpolation and use of ...
