Overview. The HutchColor HCT is a high-precision, individually-measured ICC profiling target for demanding scanner and camera users. With about twice as many patches, a better sampling of dark colors and three times as many gray scale steps as standard IT8.7/1 and IT8.7/2 targets, the HCT can characterize cameras and scanners more accurately, especially in rich colors and dark shadows.

All may be equally expert or ignorant – a "symmetry of ignorance." The only way to understand the problem is by devising solutions and seeing how they further knowledge about the problem. This procedure reverses the normal flow of our traditional analytical thinking – with wicked problems, the solution should come before the problem!
