A simple pendulum has a small-diameter bob and a string that has a very small mass but is strong enough not to stretch appreciably. The linear displacement from equilibrium is , the length of the arc. Also shown are the forces on the bob, which result in a net force of toward the equilibrium position—that is, a restoring force.

When a free positive charge is accelerated by an electric field, such as shown in , it is given kinetic energy. The process is analogous to an object being accelerated by a gravitational field. It is as if the charge is going down an electrical hill where its electric potential energy is converted to kinetic energy.

We can see from this graph that when the neuron's output is close to \$1\$, the curve gets very flat, and so  $\sigma(z)$  gets very small. Equations (55) and (56) then tell us that  $\tau(z)$  w\$ and  $\tau(z)$  partial C / \partial b\$ get very small. This is the origin of the learning slowdown.

Statics is the branch of mechanics that is concerned with the analysis of loads (force and torque, or "moment") acting on physical systems that do not experience an acceleration (a=0), but rather, are in static equilibrium with their environment. When in static equilibrium, the acceleration of the system is zero and the system is either at rest, or its center of mass moves at constant velocity.

Professor PZ Myers demonstrates one more time how ID advocates misrepresent scientific data, trying to utilize them for their own goals. The case in point is a high-quality scientific article analyzing the process of the increase in size of life forms over the millennia; the authors of that paper found links between the organism's size increase and the evolution of the earth atmosphere's ...

This question is similar to an earlier question: "How many dimensions does the state space of a qubit have?" It may seem inefficient to have such similar questions, but it helps build fluency with the material when you have the "same" information encoded into memory in multiple ways, triggering off different associations.
