If the above questions do not help you decide which tests to run, here is a list of some common contaminants which are a good baseline test.

Testing My Well Water - Montana State University

Biodegradation is the biologically catalyzed modification of an organic chemical's structure. However, this modification can be through different metabolic pathways and does not necessarily mean a reduction in toxicity. Mineralization, one type of biodegradation, is defined as the conversion of an organic substance to its inorganic constituents, rendering the original compound harmless.
