Measurement of 'length' includes distance, displacement, position, dimensions, size, area, volume and surface texture. It is a fundamental requirement in most engineering and manufacturing industries and a critical part of setting up and operating many science experiments and facilities.

The dimension of a vector space is the number of vectors in any basis for the space, i.e. the number of coordinates necessary to specify any vector. This notion of dimension (the cardinality of a basis) is often referred to as the Hamel dimension or algebraic dimension to distinguish it from other notions of dimension.. For the non-free case, this generalizes to the notion of the length of a ...

In computing, the star schema is the simplest style of data mart schema and is the approach most widely used to develop data warehouses and dimensional data marts. The star schema consists of one or more fact tables referencing any number of dimension tables.The star schema is an important special case of the snowflake schema, and is more effective for handling simpler queries.

The one-dimensional wave equation can be solved exactly by d'Alembert's solution, using a Fourier transform method, or via separation of variables.. d'Alembert devised his solution in 1746, and Euler subsequently expanded the method in 1748.

Four-dimensional geometry is Euclidean geometry extended into one additional dimension. The prefix "hyper-" is usually used to refer to the four- (and higher-) dimensional analogs of three-dimensional objects, e.g., hypercube, hyperplane, hypersphere. n-dimensional polyhedra are called polytopes. The four-dimensional cases of general n-dimensional objects are often given special names, such as ...

This page examines the properties of three-dimensional or 'solid' shapes. A two-dimensional shape has length and width. A three-dimensional solid shape also has depth. Three-dimensional shapes, by their nature, have an inside and an outside, separated by a surface. All physical items, things you ...

In this post, we will learn about Principal Component Analysis (PCA) — a popular dimensionality reduction technique in Machine Learning. Our goal is to form an intuitive understanding of PCA without going into all the mathematical details.

Christianity makes some rather remarkable claims about the abilities of God. From a human perspective, the idea that any being can do these kinds of actions seems preposterous. However, since God is "outside of the box," we need to think outside the box. There is much evidence from both the Bible ...
