Error Control Coding Shu Lin
This book owes its beginnings to the pioneering work of Claude Shannon in 1948 on reliable communication over noisy transmission channels. Shannon's central theme was that if the signaling rate of the system is less than the channel capacity, reliable communication can be achieved if one chooses proper encoding and decoding techniques.

There are so many codes included in this book, and I am not interested in 'knowing' every code in the world, so for me the real world application is more important then I can choose a certain code to learn if I have limited time. Otherwise it looks to me only a collection of codes but not too much inspiration and insight.

Convolutional Codes: For an (n,k) block code, at each time, the output of the encoder is an n-tuple which only depends on the current k-tuple input. For an (n,k) convolutional code at each time, the n-tuple output depends not only on the current k-tuple input but also on the previous m input blocks. An (2,1) convolutional code, Rate R = k/n = 1/2.
