In classical mechanics, analytical dynamics, or more briefly dynamics, is concerned with the relationship between motion of bodies and its causes, namely the forces acting on the bodies and the properties of the bodies, particularly mass and moment of inertia.The foundation of modern-day dynamics is Newtonian mechanics and its reformulation as Lagrangian mechanics and Hamiltonian mechanics.

Abstract. This paper applies the concept of a Capability Maturity Model to Training and Education – the realization that how you design and deliver training (your process) is as important to your success as what you deliver (your product). It is based largely on the classical CMM and CMMI developed by the Software Engineering Institute (SEI), but it doesn't stop there.
