Once started as a one-pager about website dimensions and responsive webdesign, this site has become a collection of webdesign related articles.

Website Dimensions - The Resource for New Webdesigners.

width versus device-width. In CSS media the difference between width and device-width can be a bit muddled, so lets expound on that a bit. device-width refers to the width of the device itself, in other words, the screen resolution of the device. Lets say your screen's resolution is 1440 x 900. This means the screen is 1440 pixels across, so it has a device-width of 1440px.

CSS media queries: width versus device-width - JavaScript

Color Depth Statistics. Newer computers use 24 or 32 bits display hardware, and are able to display 16,777,216 different colors. Older computers use 16 bits display hardware, which gives a maximum of 65,536 different colors.
