Evaluation of Definite Integrals by Substitution. Consider a definite integral of the following form. Step 1 Substitute $g(x) = t \Rightarrow g'(x) dx = dt$. Step 2 Find the limits of integration in new system of variable i.e.. the lower limit is $g(a)$ and the upper limit is $g(b)$ and the $g(b)$ integral is now

In this section we will take a look at the second part of the Fundamental Theorem of Calculus. This will show us how we compute definite integrals without using (the often very unpleasant) definition. The examples in this section can all be done with a basic knowledge of indefinite integrals and will not require the use of the substitution rule.
