Computer hardware includes the physical, tangible parts or components of a computer, such as the cabinet, central processing unit, monitor, keyboard, computer data storage, graphics card, sound card, speakers and motherboard. By contrast, software is instructions that can be stored and run by hardware. Hardware is so-termed because it is "hard" or rigid with respect to changes or modifications ...

Computer hardware - Wikipedia

Ask a geek how to fix a problem you've having with your Windows computer and they'll likely ask "Have you tried rebooting it?" This seems like a flippant response, but rebooting a computer can actually solve many problems.

Why Does Rebooting a Computer Fix So Many Problems?

A computer is a machine that can be instructed to carry out sequences of arithmetic or logical operations automatically via computer programming.Modern computers have the ability to follow generalized sets of operations, called programs. These programs enable computers to perform an extremely wide range of tasks.

Computer - Wikipedia

"I've been a customer of Computer Hardware for for at least 10 years, maybe more. In my opinion, they are better than an actual Apple Store. Everyone I've worked with there, Jeremiah, Sheena, Mitch, etc., are extremely friendly, know me by name, and make me look forward to visiting their store."
