The time interval between two discrete instants is taken to be sufficiently short that the data for the time between them can be approximated by simple interpolation. Discrete-time control systems differ from continuous-time control systems in that signals for a discrete-time control system are in sampled-data form or in digital form.

TU Berlin Discrete-Time Control Systems 3 Direct design of a digital controller for a discretised plant – or for identified time-discrete models – or for inherently sampled systems (e.g. control of neuro-prosthetic systems) – enables larger sampling times compared to the digital realisation of 'analogue' controllers – enables other features that are not possible in continuous time ...
