Sturm–Liouville theory is a theory of a special type of second order linear ordinary differential equation. Their solutions are based on eigenvalues and corresponding eigenfunctions of linear operators defined via second-order homogeneous linear equations.The problems are identified as Sturm-Liouville Problems (SLP) and are named after J.C.F. Sturm and J. Liouville, who studied them in the ...

Equations often contain terms other than the unknowns. These other terms, which are assumed to be known, are usually called constants, coefficients or parameters.. An example of an equation involving x and y as unknowns and the parameter R is + =. When R is chosen to have the value of 2 (R = 2), this equation would be recognized, when sketched in Cartesian coordinates, as the equation for a ...

Green's Function. Generally speaking, a Green's function is an integral kernel that can be used to solve differential equations from a large number of families including simpler examples such as ordinary differential equations with initial or boundary value conditions, as well as more difficult examples such as inhomogeneous partial differential equations (PDE) with boundary conditions.

In analisi matematica, un'equazione differenziale alle derivate parziali, anche detta equazione alle derivate parziali (termine abbreviato in EDP o spesso in PDE, dall'acronimo inglese Partial Differential Equation), è un'equazione differenziale che coinvolge le derivate parziali di una funzione incognita di più variabili indipendenti.. In essa si descrive la funzione indirettamente ...
