Dcpromo Answer File 2008 R2 To add one more thought to the points that have already been made: Never run DCPROMO /FORCEREMOVAL on a domain controller that is plugged into the network that contains the domain from which you just forcefully removed it, and never reintroduce this same server to the domain

Dcpromo Answer File 2008 R2 - screenawards.indianexpress.com
Hello, This question is specific to Windows Server 2008 R2. When I use DCPROMO, typically I provide these details: - New Forest / Forest Name - Domain NetBIOS Name - Functional Level - Windows 2008 R2 - Additional Options - select DNS server (static IP address warning) - Restore AD Password. Is it possible to automate this process using a PowerShell script?

PowerShell instead of DCPROMO (Windows 2008 R2)
The normal way to debug an answer file is to simply run the command line above. If there are any errors in the answer file, Dcpromo simply aborts the unattend mode and brings up the Wizard, requiring you to enter the missing information. Once you run Dcpromo and no GUI dialogs appear, you know the answer file is correct -- at least syntactically.

Dcpromo using an unattended answer file
Summary. Performing an unattended installation using an answer file is easy and can be performed without any user interaction, using the answer file eliminates the need for an administrator to interact with the wizard, and can be used to automate subsequent installations of Active Directory Domain Services.
