Popular screen resolutions: designing websites for all ...
Color Depth Statistics. Newer computers use 24 or 32 bits display hardware, and are able to display 16,777,216 different colors. Older computers use 16 bits display hardware, which gives a maximum of 65,536 different colors.

Browser Display Statistics - W3Schools
width versus device-width. In CSS media the difference between width and device-width can be a bit muddled, so lets expound on that a bit. device-width refers to the width of the device itself, in other words, the screen resolution of the device. Lets say your screen's resolution is 1440 x 900. This means the screen is 1440 pixels across, so it has a device-width of 1440px.

CSS media queries: width versus device-width - JavaScript
18 Responses to Not Designing for Most Common Screen Resolution. Don Moore Says: December 17th, 2008 at 8:24 am . The reference to the Webstyle Guide is outdated (2004). We are on the horizon of moving to the 1024 width, though our stats still show 17% of our audience is not there yet.

Not Designing for Most Common Screen Resolution
Flexible Grid. Let's see how this formula works inside of a two column layout. Below we have a parent division with the class of container wrapping both the section and aside elements. The goal is to have have the section on the left and the aside on the right, with equal margins between the two. Normally the markup and styles for this layout would look a bit like the following.

Responsive Web Design - Learn to Code Advanced HTML & CSS
I am having issues horizontally centering my slideshow images so that they are central on all screen sizes / resolutions. The HTML looks as such

html - CSS Centering Slideshow Images - Stack Overflow
One of the great things about Twitter's Bootstrap 2 and Bootstrap 3 are the responsive utility classes. It makes hiding / showing content on only specific resolution sizes or devices easy.

CSS: How to Easily Hide Content On Only Mobile or Only ...
I think it's also important to take window height into account. I use a 27″ monitor, but I don't run

the browser fullscreen (why would I?); instead I run it taking up half the screen, so it's 'only' 1280px wide, but still 1440px high, so I feel like I need to have larger text than if I was running a browser fullscreen on a 1280×800 laptop screen.

Optimizing for Large-Scale Displays | CSS-Tricks
I have been doing some research on media queries and I still don't quite understand how to target devices of certain sizes. I want to be able to target desktop, tablet and mobile. I know that there

css - Media Queries: How to target desktop, tablet and ...
Divs with position: relative; 2 A div is a block element (see a list of others in the link). If you code several block elements like divs with position: relative or without stating a position, they will display one below the other.
