Statistics is a branch of mathematics working with data collection, organization, analysis, interpretation and presentation. In applying statistics to, for example, a scientific, industrial, or social problem, it is conventional to begin with a statistical population or a statistical model process to be studied. Populations can be diverse topics such as "all people living in a country" or ...

Statistics - Wikipedia

A questionnaire is a research instrument consisting of a series of questions (or other types of prompts) for the purpose of gathering information from respondents. The questionnaire was

invented by the Statistical Society of London in 1838.. Although questionnaires are often designed for statistical analysis of the responses, this is not always the case. ...

In statistics, there are four data measurement scales: nominal, ordinal, interval and ratio. These are simply ways to sub-categorize different types of data (here's an overview of statistical data types) .. This topic is usually discussed in the context of academic teaching and less often in the "real world."

Types of data measurement scales: nominal, ordinal, interval
Volume 14, No. 2, Art. 5 – May 2013 . Life With and Without Coding: Two Methods for Early-Stage Data Analysis in Qualitative Research Aiming at Causal Explanations Jochen Gläser & Grit Laudel. Abstract: Qualitative research aimed at "mechanismic" explanations poses specific challenges to qualitative data analysis because it must integrate existing theory with patterns identified in the data.
