Problem Set 1 Solutions Point totals are in the margin; the maximum total number of points was 52. You should use these solutions as a rough guide to the level of detail expected in your own solutions. 1. Testing commutativity in groups (a) Note first that some generator g i must lie outside H, since H is a proper subgroup. So let i be the 5pts

The most common solution is for the network's switches to collectively solve the problem of finding paths that the end points' packets take. Although network designs where end points take a more active role in deter mining the paths for their packets have been proposed and are sometimes used, even those
